SSP Progress Monitor - Nonword Assessment

Revision date: 28th Jun 2023 v1.11

This monitoring tool enables instructors to assess/review progress of decoding accuracy for reading within a Systematic Synthetic Phonics (SSP) approach.

The stimulus items selected for these assessments are drawn from the ARC Nonword Database <https://www.elr.com.au/links/CVFJB>, and are single-syllable, "legal" nonwords; that is, the spelling patterns are consistent with the English orthography (eg "ck" never appears at the start word s)..The Placement tests may be used to indicate mastery level..

Response Forms and lists of Stimulus Items are provided for 10 levels using nonwords that include at least one grapheme from the target level, with any additional graphemes from previous levels The first level has three lists of 10 items, and in other levels, there are five lists with 12 items. Each list is unique, but equivalent to others at the same level.
